

Who owns the copyright for scholarly materials at Xavier University?

In general, authors (faculty, students, staff,) at XU own the rights to their works of scholarship unless they have given those rights in writing to another party or have produced the work under a grant that required some other distribution of rights. Some examples of works of scholarship include:

- scholarly publications
- journal articles
- books
- plays
- poems
- works of music
- works of art

Works of scholarship do not include software.

What rights do I give to Xavier University when I submit my materials to XU DSpace?

In order to place your work(s) in XU DSpace and make them openly available on the web, you must agree to the XU DSpace limited, non-exclusive license, which:

- confirms that you own the copyright to the items,
- grants Xavier University permission to make the items accessible worldwide on the web, and
- grants Xavier University permission to take the necessary steps to preserve them.

Under this agreement between you and Xavier University, you retain all rights you had to these items before they were deposited, such as making copies available on other web sites or publishing them in the same form or in a revised form. There is no need to obtain additional permission from Xavier University.

NOTE: The permission you grant to Xavier University by accepting this license is non-revocable; once granted, copyright holders cannot rescind their permission for Xavier University to make accessible and preserve these works.

If you submit your own work to XU DSpace, you will be required to agree to the *XU DSpace License* as part of the submission process. If the library will be submitting material on your behalf, you must grant permission using the *XU DSpace Mediated License and Permission Form*.

What about works with multiple authors?

Co-authors who wish to submit materials to XU DSpace must have permission from other copyright holders to do so.

What rights do readers of XU DSpace have?

By default, materials deposited into XU DSpace are open access, which means anyone on the web can access them. Also by default, all XU DSpace materials are protected by copyright, with all rights reserved by the copyright holder.

As an alternative to reserving all rights, authors are encouraged to consider licensing their works (particularly learning objects and works in non-print formats) under a *Creative Commons License* (<http://creativecommons.org/about/licenses/meet-the-licenses>), under which they can preserve those rights that are most important to them (e.g., proper attribution,) and at the same time explicitly grant to readers certain other rights chosen by the author to be used at the readers discretion (e.g., copy, distribute, display, or perform the work.) Documents in XU DSpace that are licensed under *Creative Commons License* will display the license conditions.

What are the copyright guidelines for frequently-deposited materials in XU DSpace?

- **Existing Published Works:** Xavier University wants to provide open access to the full text of authors' articles that have already been published in scholarly journals. However, many publishers do not grant such rights. For these materials the library will check with publishers to see if the author copyright agreement allows the author to post the article in a local open-access repository using information found on the RoMEO (Rights METadata for Open archiving) Project web site at <http://www.sherpa.ac.uk/romeo.php>. This web site has compiled a list of many journals' copyright policies about self-archiving. If the publisher has not granted that right to authors in the standard author agreement, the library will provide a citation for the article and a link to the full text when it is available in a journal for which the library has a full text subscription. This link would be password protected, permitting access for only current Xavier faculty, staff and students. Although it is best for the library to obtain an author's explicit permission to distribute their work in XU DSpace (see the *Permission Form for Mediated Submissions*), this requirement might be waived for materials that have been published prior to XU DSpace in the Division of Academic Affairs, *Scholarly Presentations*.
- **Postprints (works accepted for publication):** Authors often want to provide open access to the full text of their articles that have been reviewed, revised and accepted for publication in scholarly journals or other published formats. Many publishers do grant their authors such rights, but policies vary widely. Authors should check with their publishers to see if the author copyright agreement allows the author to post the article in a local open-access repository. The RoMEO Project (Rights METadata for Open archiving) web site at <http://www.sherpa.ac.uk/romeo.php> has compiled a list of many journals' copyright policies about self-archiving. If the publisher has not granted that right to the author in the standard author agreement, authors are encouraged to contact their publisher and request permission to do so. For future agreements, authors are encouraged to understand their rights as authors and to consider retaining some of them. An easy-to-use author addendum (http://www.arl.org/sparc/author/docs/AuthorsAddendum2_1.pdf) at the SPARC (Scholarly Publishing and Academic Resources Coalition) Create Change web site (<http://www.arl.org:16080/sparc/author/addendum.html>) helps authors negotiate with publishers for those rights.
- **Preprints (draft papers that have not been submitted for publication):** Authors frequently submit draft papers to preprint repositories or working paper series for review and feedback prior to submitting them for formal publication. Since most of the preprint

repositories are open-access, authors would retain the right to also deposit those works into XU DSpace. However, authors who wish to deposit a pre-print into XU DSpace are advised to check pre-publication requirements of journals to which they may subsequently submit the work for formal publication. Some publishers may view such pre-print posting in open-access repositories as prior publication and will not publish the articles; others may require that preprints be removed upon publication in their journal.

- Conference Papers, Presentations, etc.: In general, these are traditional works of scholarship, and unless transferred in writing to another entity, all rights remain with the author.
- Works Published/Distributed by Xavier University (academic departments, research centers, etc.): Working paper series, research reports, conference proceedings, and other scholarly materials published/distributed by Xavier University via their web site or in printed publications may be posted into XU DSpace with appropriate author permissions. It is best for departments to obtain the author's explicit permission to distribute the work XU DSpace, but that requirement might be waived for materials that have been published prior to XU DSpace under shared understandings that the departments would distribute or publish them.
- Student Dissertations & Theses: XU students retain all rights to their dissertations and theses. When they submit their dissertations to XU, they are asked to give Xavier University permission to distribute their dissertation via XU DSpace.
- Undergraduate and Graduate Student Papers and Projects: In general, students retain all rights to the materials they produce at Xavier University, unless the material came from a grant-funded project or the student has - in writing - transmitted his/her copyright to another entity. Departments that would like to post student scholarship in XU DSpace must first obtain the student's permission to distribute the material in XU DSpace, and should provide full disclosure to students about possible future publication restrictions if the paper has been posted in an open-access repository.
