Corporate Engineer - EH&S Program Manager

Category: Engineering & Quality  
Location/City: KY - Florence, Kentucky

Recruiter: contract directly at 513-366-3765 or via email masipple@centennialinc.com

Centennial, Inc. has been retained to identify and recruit a Corporate Engineer with Environmental, Health & Safety Program Management experience for one of our highly-valued Northern Kentucky clients. The Corporate Engineer will provide project and technical leadership on assigned projects. The hired individual will work to identify and evaluate key technology, cost, safety, health and other related issues and recommend appropriate solutions and actions. He/she will be responsible for all aspects of personal and process safety and site security throughout the corporation.

This leader will also manage all Process Safety Management & Audits; Process Safety Analysis, Process Hazard Analysis, OSHA Hazard Communication Standards and Globally Harmonized Systems across the organization.

Other duties and responsibilities include:

- Provide technical and management leadership to assigned projects. Interpret technical requirements in light of business needs (timing and cost) in an innovative and cost effective manner.
- Functions as a senior consultant on process and manufacturing technology issues throughout the company. Responsible for ensuring the technical excellence and scientific soundness of assigned projects. Responsible for leading Process Hazard Assignments.
- Develops in depth knowledge of company’s manufacturing technology and processes. Understands the relationship between the value of technology development and the execution of business strategy. Works with business management to assure project justification.
- Identifies issues, secures resources, solves complex problems and manages to successful completion significant and complex projects in a cost-effective manner.
- Provides professional safety and health leadership to plant safety and health professionals in the areas of risk assessment, safety training, inspections and reporting.
- Reviews and inspects operations and recommends actions to ensure safety and leadership to manufacturing site EH&S managers.
- Develops and manages corporate capital budget for health and safety projects throughout the organization.
- Provides input and analysis relative to the organization’s safety goals and the establishment of long-term safety culture.
- Responsible for workers’ compensation programs and for driving related cost reductions.
- Stays current with industry developments

Requirements

- Minimum 10 years of current experience in the chemical process industry
- BS in Engineering - strongly prefer chemical engineering degree
- OSHA Hazard Communication Standards - OSHA HazCom, Globally Harmonized Systems - GHS experience required
- Demonstrated record of successful process development and project management achievement
- Demonstrated understanding of project economic evaluation and business requirements for projects
- Demonstrated knowledge of process safety codes
- Excellent problem solving and written and verbal communication skills
