Creating an Urban Eco-Lab:
A Complete Montessori Elementary Science Curriculum
Sponsored by Xavier University Montessori Lab School and presented by the Keynote speaker at CMS 2018 Conference Geoffrey Bishop

Saturday, October 20, 2018, 9:30 am – 4 pm

It can often be a struggle for teachers to connect students and their curriculum to what is going on in the outside world. There can be a tendency to dismiss the outdoor environment as a place that is not connected to nature – and to have the misconception that access to Nature is not readily available.

Join us for an in-depth process of creating an Eco-Lab program (YES, even in your school’s urban environment!) and learn practical ways to connect children to the natural world from the smallest flower to the awesome forces of nature. Through all academic subjects, we can bring nature alive and kindle the spirit of exploration in our children.

This workshop is designed for lower and upper elementary as well as middle and high school programs. While the manual’s content is not specifically directed toward early childhood students, the information is adaptable and contains many ideas an early childhood program could implement.

Register Online Here

Cost: $50 includes 6 – 12-year-old manuals in binders. Sample of Manuals
(The workshop is usually $310. XU Montessori Lab School is covering all but $50).
Lunch: Bring your own. Breakfast foods, drinks, and light snacks will be served.
Location: Xavier University Joseph Hall. 1024 Dana Ave. Cincinnati, OH 45229.
Questions: Contact Kristyn Jossart at jossartk@xavier.edu or 513-745-3424
