

# Suite Temperature Control

*For your comfort please review the following:*

Our Heating and Air Conditioning System can provide only hot air in the winter (November - April) and only cool air during summer (May-September) In May and October the air we provide depends on the outside temperature.

**If you find that your suite is too hot or too cold,  
we suggest the following:**

1. Turn fan on for hot air during the winter.
2. Turn fan on for cool air during the summer.
3. Adjust the thermostat to your comfort level.
4. Please contact Physical Plant if you need further assistance.

Thank You!
